Photoshop 2021 (Version 22.5.1) Crack +

1. **Open your image.** The image you wish to transform in Photoshop should have a background layer already. You can open any image and create a new layer by pressing the New Layer icon on the Layers panel (refer to Figure 7-3). 2. **Place the image on your monitor and make sure the background is not covered by your image (see Figure 7-4).** The largest of the image's background layers should be about twice the image's height. This is known as creating a new background layer. You can resize an image to fill the new background layer. 3. **Select and Copy the Background layer (see Figure 7-5).** Click on the layer's thumbnail to select it. Then click on the Copy icon (the copier on the toolbar) on the Layers panel. The Background layer becomes highlighted, indicating that the layer is copyable. 4. **Click OK to close the Layer dialog box.** The Background layer will be highlighted on the Layers panel. Drag the Background layer into the background section of your document. While holding down the Ctrl key on your keyboard, click anywhere inside your document and drag the Background layer into the document area (it appears temporarily in front of the layer you selected, and no selection markers are shown on the active layer). 5. **Type away!** Feel free to begin typing on your document. The image should update to show the text and other elements you wrote. FIGURE 7-3: Click the New Layer icon to create a new background layer for your image. FIGURE 7-4: You should see the new layer. FIGURE 7-5: Copy the layer's properties to create a backup copy. # CONTROLLING COLOR The number of colors on the color wheel is finite — it begins with the color you see right next to it and ends where the color you see left of that one starts. The colors in between are a blend of two colors, or a blend of the color you just saw and the next color in the sequence on the color wheel. In Photoshop, each color on the color wheel has a range of values. In other words, a color value of 100 (or any specific percent) represents a mixture of two other colors. For example, 100 RGB 100 RGB 200 RGB creates a gray. Changing the percent setting changes the mix,
