Shop Visits Tuesday, June 17, 2009 His hands paused a moment, before moving to her stomach and continuing his descent into paradise. "...where my son lives..." His fingers stroked back and forth along her skin, heat radiated up from between her thighs. The pressure of her abdomen lightened, and the quivering that was spreading across her torso escalated, until it actually stopped her from breathing. He felt her clench around his prick. "Oh, God, you're so wet." He groaned before adding, "Did you come already?" "Yes," she gasped in his ear. He chuckled while bringing his hand back to the edge of her nightie and peeling it up, without removing his lips from her. "Oh, I'm sorry... so you want me to go slow?" Hands sliding over him now, stroking him as his mouth returned to her belly. "Garnett, no... please... you're killing me. Slow is the only way." "Then slow it is." The word crawled across her abdomen and he enveloped her with kisses, kissing, whispering, testing her G-spot, making her want to experience more. He pulled up his shorts and slid off the bed, then he removed his shirt. Her breath caught in her throat, and her eyes couldn't look away. Skin stretched tight, muscles gleaming, and curls covering his chest. He looked like a living statue, and she had to touch him. He knelt, pulling her nightie off her, then up her body. His hands rested on her stomach, so she could feel him slide the cloth down her thighs, then off her feet. His hands found her nipples, squeezing them gently. "Kiss me," she whispered in his ear. "Please." All the innuendos went flying out of her head as she felt him slip his tongue in and out of her mouth, his hands grasping her other breast, rolling it in his palm. Their soft

To evaluate the influence of implant geometry on the biomechanical behavior of the bone-implant interface in cylindrical specimens of a synthetic bone. Three groups of implant screws were prepared (A, B, and C). The implants (A) had a convex surface, (B) a rough surface, and (C) a smooth surface. The implant threads were 2 mm in length. Groups B and C were reduced to a radius of 1.0 mm to evaluate only the influence of implant geometry. Three-millimeter-thick cortical-cancellous-bone cylindrical specimens with a diameter of 8.0 mm were prepared from commercially pure synthetic bone.
