Snakes-N-Ladders: Origins - Episode 1 is a Sci-Fi action-shooter game that takes place on a dark forest planet. It has a simple, one-life-force-meter story-line of a Galactic-TriAlliance soldier who is looking for an artefact that could change the fate of the galaxy. There is not much to this story, other than character development and a snarky, sarcastic, and sardonic sense of humor. This game is not about story, this game is about action and thrills. Snakes-N-Ladders: Origins - Episode 1 is an independent game created by the game developer Snakes&Ladders: Origins. This game is not intended to be a sequel to Snakes&Ladders: Origins, or any other Snakes&Ladders video game. Snakes&Ladders: Origins has not been linked to Snakes-N-Ladders: Origins - Episode 1 in any way. Many questions have been raised, "Why is Snakes&Ladders: Origins - Episode 1 connected to the Snakes&Ladders website? This is a relevant question to people who read too much into this game. The bottom line is simple: Developers Snakes&Ladders make games that Snakes&Ladders sells. Snakes&Ladders itself doesn't have an interest in the results of other games. Snakes&Ladders: Origins - Episode 1 is a small, fun and simple shooter-game that shouldn't take more than an hour to play through once you get the basic concepts of it. Snakes&Ladders has never been concerned with epic over-the-top story-lines. This is why Snakes&Ladders is an independent developer, not an official game produced by the game company that makes the Snakes&Ladders board game. Snakes&Ladders: Origins - Episode 1 is currently in production, and is a stand-alone game. Snakes&Ladders: Origins - Episode 1 is played with a standard Arcade-style-button-pad for game-controls, and a controller or gamepad is highly recommended. This game will NOT work with mouse-based controllers like the Logitech-Gundam - 700/750. This is a Snakes&Ladders game, not a Sunsoft game, and shouldn't be confused with any other Snakes&Ladders games.

WASHINGTON (MarketWatch) -- The Federal Reserve's unexpected decision to hold short-term interest rates steady on Tuesday even as the economy continues to falter came as a real blow to investors and economists who had expected an increase in this month's rate. The news was shocking to economists and investors who have watched the Fed implement monetary easing more explicitly to address excessive risk taking and the Federal Deposit Insurance Corp. and other regulators struggle to shore up trouble financial institutions. The stock market has plunged to levels not seen since the Sept. 11 attacks. The staff of the Fed said in a press release issued after the decision that the central bank held interest rates steady to provide support to the economy and to ensure that inflation expectations are "broadly and appropriately anchored." Uncertainty over the market jitters across the globe caused by the Fed not raising rates and the Fed's inability to reverse major market bubbles like the excessive euphoria over housing in 2007 has in turn raised the possibility that the Fed will be blamed for whatever happens next, economists and economists say. William McClure, an economics professor at the University of Pennsylvania, said many economists don't believe the Fed will trigger any crisis, but they think the central bank needs to be much more transparent. "The Fed is in a very tough situation here and nobody knows if this decision is optimal," he said, pointing out the recent Fed actions like selling Treasury bonds, bond trading done outside of the view of the official federal open market committees, would "eat away" at the Fed's reputation for clearing things up. The yield on the 10-year Treasury note TMUBMUSD10Y, 0.8390% was up slightly at 3.52% in early afternoon trading. Short interest in the T-bond was down as of Tuesday afternoon, according to a breakdown of T-bond trading published on the website FinViz. Those investors who want to punish the U.S. government for it holding an underwater amount of bonds issued versus the
