MDA is an acronym for Microsoft Data Access that is a programming language created by Microsoft for data access programming. The MDA language is the language in which most of the ADAS development is done, allowing users to easily access and edit data from tables, reports, databases and other data sources. Device Since the release of AutoCAD Activation Code 2000 (XpressCAD), AutoCAD supports the computer as its primary interface. This allows the application to receive information from the user, such as where the pointer is, or the coordinates of a mouse click. However, not all AutoCAD options can be accessed through the computer keyboard or mouse, therefore a small number of options are available via the program's ObjectARX or LISP programming languages. Additional features such as macros and layers can be implemented via plugins. File formats AutoCAD's drawing formats are considered to be one of the best drawing formats available. They support non-proprietary features and functionalities and are widely used in the architectural design industry. They are XML based, like all other AutoCAD formats, in order to support growth and improvement of AutoCAD for the future. In addition to the three standard AutoCAD drawings formats (DWG, DXF, and DWF), AutoCAD includes PDF (PostScript) and drawing exchange (DXL) formats, in addition to the standard AutoCAD formats. AutoCAD supports several AutoCAD extensions that are not commonly used. These include STEP, ASCIIIDOC, ODS (ODF), VRML, and ISML. AutoCAD supports nearly all available drawing file formats, including: BESK (AutoCAD 2009 and earlier) ECW (Fibaro Draw Plus and DrawPlus 2D) FSD (Siemens format) HPGL/2 (Adobe System Illustrator and Adobe Photoshop) IGES (Iron Work Systems) OFF PCT (Windows Portable bitmap, PC Paintbrush) PICT (Portable Picture) PDF (Adobe Acrobat) STEP (STEP Alliance) STL (CATIA) TIGER/Line VRML (Vector) XDWG (XMLDWG) XPS (Windows Portable bitmap) External links AutoCAD Plugins AutoCAD Exchange AutoCAD extensions References Category:Autodesk af5dca3d97

Generating a key for the current drawing. In Chapter 9, we will discuss how to use the Generate key command. ## Generate Key (Ctrl+K) \* Type: Generate key \* Shortcut: Ctrl+K \* Selects the default key for a new drawing. ## Generate Key (Alt+K) \* Type: Generate key \* Shortcut: Alt+K \* Selects the current key from the current drawing. ## Use a Geometry Driver As you have seen in previous sections, the Generate command is one of the main commands that can be used to generate the key file. However, this command can be configured to use a different command (Geometry driver), when you press Alt+G. In this section we will explore the Geometry driver and discuss how to generate keys using this command. Figure 6-17. Selecting the geometry driver. As the figure shows, you have three options available. The first option is to create a new drawing (AutoCAD only) or open a file (both AutoCAD and AutoCAD LT). The second option is to open a dialog to select the key file or the default key. The last option is to select the geometry driver from the list. The option should look like the following image: Figure 6-18. Three options for the geometry driver. ## Use a Geometry Driver (Alt+G) \* Type: Geometry driver \* Shortcut: Alt+G \* Selects the geometry driver from the list. Figure 6-19. Selecting the geometry driver. ## Geometry Driver List In the previous section we discussed the geometry driver. The list includes the following three options: \* Key
