We were home all day Wednesday and we were late leaving the house on Thursday and late to the restaurant (we were supposed to meet our friends at 9:30). By the time we got there, Mikal and Amber were missing, but when we walked in, it was already close to 10:00. My buddy, Dave, and I headed to the bar area (I think we had already eaten at one point, but I'm not sure where) and that's when I noticed that Amber and Mikal were missing. We called and called and they were going to call, but then Dave and I just stood around and waited. When they finally called and we had a conversation, they told us that they were running late, and they got the hotel to give them a different room number because they were all the way down at the other end of the hotel. (video: 1:08 min.) Use Undo to quickly erase groups of linked objects that have been inserted into your drawing. (video: 1:05 min.) Accelerate the experience by removing the need to switch between applications and data storage locations. Link your.dwg and.dwt files directly to the cloud with a single click. Create 3D Modeling: Multi-paged drawings that integrate physical models, mechanical designs, and blueprints and offer a single click to view the embedded models and corresponding physical design documentation. (video: 1:32 min.) Use 3D printing-ready symbols to create a digital data file that can be converted into a usable 3D model. Save time and money with improved reporting and generation of reports that reduce the number of paper documents and information that need to be tracked and reconciled. Speeding up operations Batch importing Navigating the screen can be slowed by the need to manually resolve links between objects. Batch importing processes CAD files containing groups of linked objects to speed up navigating and importing. Batch importing has been significantly enhanced with the following enhancements: Set the maximum number of objects to import in a batch. You can import a maximum of 3000 linked objects per batch. All linked objects are imported first and then linked objects are imported in an auto-feedback order. Include a preview of the linked objects to quickly determine if the batch has been processed correctly. Select and remove the imported links from the batch. Build an index of all the imported links to improve performance by quickly locating objects in the batch. Determine which links should be included in the index and which links should be excluded from the index. Automatically save the workbook when you open it and ensure that you can create and save the file later. All drawing properties are available for links, including layer and drawing visibility. The links are automatically updated when the drawing or layer properties are changed. Automatically update
