## Cod2JdkBotDownload

cod2jdkbot: I can't reproduce this with git to work in .gitignore on my system, but still in the repo. Is there a way I can make it work in git to work in .gitignore? For example, I have one file in the repository called "codefender.gitignore". It's a file that doesn't show up on my system (I checked). This is the file I want to add to .gitignore in my repo. When I run git add .gitignore on the repo, it doesn't add that file.
