Xpedite is a handy Microsoft Excel application that allows you to create and customize complex charts that contain many different metrics. For example, it is possible to calculate a real-time budget, to create profitability curves, to print a report or simply send an email to a colleague with your results. Xpedite comes with a set of useful chart templates that you can customize to your liking, however, you can also build your own charts by using the Excel formula engine. This tool does not come with an example file, so you will have to know how to create a chart in Excel to get started. Set options, display information Xpedite can be accessed via the Options tab in Excel. Here, you will find a variety of settings that can help you customize how the app displays your data. For example, you can enable or disable the legend, change the tooltip behavior, adjust the size of the chart and set the type of the chart's grid. The left side of the Options dialog contains other settings that will adjust the general look and feel of the chart. You can choose to display all the available fields or filter the data in specific ways. In addition, you can enable or disable the title of the chart and set the appearance of the chart in general. The chart types, colors, fonts and formatting can also be customized. As an added bonus, the Help section has a good tutorial that will help you learn how to customize Xpedite's charts. Integrated Excel application In order to get the best possible performance, Xpedite is built on top of the Microsoft Excel engine. As a result, you will need to have Excel installed on your computer in order to be able to access this tool. However, it does not require any additional software, so you can use it as a stand-alone program. The help section is very useful Xpedite has a very simple and easy to understand help section, that has videos to help you learn how to use the app. You can also find some additional information on the program's support website. The rest of the options are self-explanatory If you need a versatile application that can help you create complex charts from Excel, this is the right choice for you.
