I got it because I'm a photographer and I could use all the features it has.

Unfortunately it is cumbersome and not user friendly at all unless you are an image's major tool box. There's so many things you need to do to get this perfect picture turned into a photograph. Sometime I get the ideal picture without having to do any of this just to find out there's no effect or something. Plus if you use other software you could not have a perfect picture. I think if all photographers would use other programs they would be better off and if they use Photoshop they could photograph better because they would understand their camera so much more. It's been an amazing journey having used Photoshop. Thanks to all those who have helped me along the way. It's been a struggle, but I still do it for the love of what I do. It's interesting to read about all the new features that are in the works. To others who still use Photoshop, who are you guys using it for? I'm curious.
