Q: What's the difference between an operator and a function? What's the difference between an operator and a function in JavaScript? Is there any difference between the following two? `function a() { alert('hi'); } a();` and `function a(x) { x(); } a(function() { alert('hi'); });`; A: These have the same effect, in the context of your question. Function expression in your code are just a function and its expression that it can be assigned to some variable. From MDN: The Function constructor takes a function body and optionally a list of arguments. It immediately calls the function body with no arguments and returns a new Function object that caches the value returned by the function body. The use of Function is sometimes referred to as "in-line function" because it executes the function directly. Ellipsis (software) Ellipsis is a software package developed by David Lle
