The Smart Objects tool lets you create one image containing many pieces of content like an image of a family cat in many different places in your image. It allows you to manipulate the content in separate shapes and location without having to separate the elements. Transform the entire image — add or subtract — to change the angles, sizes, and shapes of the parts of the image. Everything stays in tact when the Smart Object is changed. Moving Containers — This is an easy way to move the content within a layer to reposition it, but it's also for shifting the position of the layer itself, which you can use after selecting a layer and clicking the Move tool. Using Magnetic Guides — This tool lets you create a specific path that is connected to a specific point in your project and edits on that path will always match the most recent changes made to another area of your project. Using the Clone Stamp — This is one of the most powerful tools in Photoshop. You can very easily delete areas of your image and add that area to anywhere else on your image. It's a great tool to work with heavily-colored areas and make them less so. Make sure you use the Reverse option if you want to create the effect opposite of **Content-Aware Fill**. **Be It Together:**
