Wow! That actually looks very performant. I have a very similar workflow in PS and it is very slow and sluggish. The LR team is doing a great job and I am really happy that it is part of the Creative Cloud. JToday someone said that they encountered some very weird bugs, but they were only on a Skylake MacBook Pro. I have never had those kind of bugs, but since I have only been using it since the last day, I just do not know, whether my hardware is sufficient. That was the only thing that stopped me from purchasing the new OS, which I have been waiting for since the day this software has been released.

I have had Elements since 2011 and used it to edit pictures, and can remotely access web profiles as well. The program is pretty basic and simple to operate. Easy to learn how to create and edit photos. Unfortunately, if you spend any time in elements, you find it extremely slow. I have upgraded several times since pirating it in 2011. I am not looking for a new program, however now elements is really out of control. It is very slow and complicated to use. With all the limitations, it still has too many bugs to use for professional purposes. Unfortunately, for the free version, they have even outed this program and branded it as such. I will not recommend it to anyone. If you are considering it for free, I suggest you upgrade to the early access, and stop using it for now.
Karen Thompson I have dabbled with Adobe PhotoShop but never bought it. That was until they released Elements 15. I can't wait to give it a try. It looks to finally be good enough to cut it as a semi-pro in the field. Thanks Adobe!
