In this review of Photoshop CC 2018 I'll start by taking you on an iPad Pro with Apple Pencil through the app to see what's really new in today's Photoshop. Then, I'll tell you more about my experience with the new Adobe Photoshop Rumors 5.0, which presents an early look at Photoshop design features that are under development. Photoshop Sketch debuted with the update to Adobe Photoshop CC 2018, but I'll be taking you through one image from the iPad Pro with Apple Pencil on the iPhone through the app to see what's new. **For more than a century, Photoshop's visionary inventor has been the tool responsible for transforming images into the masterpieces that define our culture.** Photoshop's original vision was to bring the magic of the camera and post-production back to the artist. Today, more than half the people who shoot on a camera are photographers, and many of them use Photoshop to edit their images. Most of the images we see in the media we consume in digital form are created with a computer. The new Eye Dropper tool, which I'll discuss a bit more below, is useful if I want to eyeball each hue in all three channels--red, green and blue--of a layer. The tool includes a bracketing feature that lets you set the tolerance for getting, say, the yellow part of a flower. Once you decide what adjustments you need to make, it's easy to add them with Layer Effects. These are applied by dragging one layer over another to hide or show the effect. Layer Effects include Drop Shadow (dimple), Glow (golden highlights), 3D (including the 3D Crop tool, that does a good job of splitting and cropping a layer into two pieces), Copy/Paste (drag one layer onto another to duplicate the new layer), Tint (change the color of a layer), and others. I use a few Layer Effects often, but not all of them. You probably won't use some of them like I do--that's the price of free.
